## COLOUR ME IN

Chimpanzees are cool! Did you know they are our closest, living relative and we share many behaviours.

## FIVE FUN FACTS

1. Chimps are 'great apes', along with gorillas and orangutans.
2. The DNA of chimps and humans is 98.5% the same. That is how closely related we are.
3. In the wild chimps live in communities led by a dominate, alpha male and made up of around 15-80 members.
4. Chimps communicate using gestures, facial expressions and vocalisations.
5. Chimps are one of the few animals that use tools to help them get things done. They're known to crack open nuts with a rock, fish out insects with sticks and shelter from the rain holding up leaves like an umbrella.

## HOW CAN WE HELP?

100 years ago over one million chimpanzee lived in the wild across 25 countries in Africa. Today, only one in 10 remain.

Chimpanzees are now an endangered species, and one of the main reasons is - HABITAT LOSS.

Their homes are shrinking. Rainforests are logged for timber and cleared for crops and grazing land. Chimps are forced to live in smaller areas that don't provide the space and food they need to survive.

But we can help with one simple action. When shopping for wood and paper products, so that's toilet paper, tissues and cards, switch to brands that feature the FSC CERTIFIED FOREST PRODUCTS logo. These are sourced sustainably.

## THE MAZE

The chimpanzee has lost his way.

Help him get through the jungle and find the rest of his troop.
